

Managing Team Response (MTR®) – Hand Hygiene Compliance & Reporting

- Workstation views and Large Format Whiteboards show when a Hand Hygiene event is missed!
- Missed event will remain on the display until a caregiver enters that room and completes hand hygiene.
- All missed events (and successful events) are recorded in the database for future reporting.
- Immediate feedback with long-term reporting creates an environment for 100% compliance success.

HR	Last In	Time	Room	Patient	A	Physician	Nurse	Ext	PCT	RESP	Ext	Procedure	CS	I	F	V	R	T	Out Of Bed	LOS	Diet

For Patient Room Boards, use a picture that relates to your current campaign. When that graphic appears in place of caregivers “who is here now” picture it is a reminder to the caregiver that they need to (because they failed to) wash hands. However, the caregiver can ‘explain’ it by sharing with the patient information about the campaign and then ‘demonstrate’ the process.

Hand Hygiene statistics can be viewed on Executive dashboard for the whole facility and drilled down by departments.

Hand Hygiene reports showing statistical and specific data are easily accessible.

Trust improved

Costs reduced

Data is accurate

100% compliance can be attained, measured, and proven.
